

The Design and Manufacture of Wrist Phones Utilizing Nano-Scale Electron Tanks and Gravitational Waves (Unlimited Charging, Global Coverage, Reliable and Seamless Satellite Connectivity, ...)

Gh. Saleh

Saleh Research Centre, Amsterdam, Netherlands

In light of the rapid advancements being made on a global scale, Saleh Theory Group seeks to make a modest contribution to this significant cause by offering wrist phones. These phones are equipped with a customized main screen designed to fit the unique contours of the wrist, accompanied by straps meticulously crafted to align with specific user needs.

The necessary hardware is integrated into the edges of the main display and the strap links. The battery is a nano scale Electron Tank, a battery with the capacity to provide the energy required by a phone for years.

The functionality of the phone is contingent on its capacity to operate within the frequency range of gravitational waves. This characteristic ensures that the device is not subject to blind spots, and it is capable of achieving optimal antenna reception in any location. Furthermore, it is important to note that gravitational waves are considered to be harmless. It is recommended that this phone be offered to consumers with the lowest possible weight and the highest possible quality. These devices are intended to connect effortlessly with their dedicated satellites (approximately 7 satellites), enabling global coverage. The phones are designed to align with the specifications of each user, thereby ensuring that each individual possesses a personalized mobile device that can be readily customized using biometric authentication methods such as fingerprints, DNA, Iris recognition, and more.
